

Learn More about Invisalign in NYC

Very few people in NYC have been blessed with perfect teeth. Many of us suffer with crossbite, overbite, underbite, or misalignment. Beyond the physical struggles of having dental problems, many individuals are also embarrassed by their teeth. Unfortunately, they may encounter even more embarrassment when they try to correct the issue with traditional metal braces.

Since 1998, Invisalign has been giving New Yorkers and people across the world a chance to straighten their smiles without embarrassment. Do you want to learn more about Invisalign in NYC? Read on for a Question & Answer session about Invisalign.

BEFORE

AFTER

Q. My smile needs some help, but that's just a cosmetic problem, right?

A. You already know that crooked teeth and other dental issues make your smile look shabby, but did you know that it could also affect your overall health? Poorly aligned teeth may cause swollen, red gums that trap food and allow bacteria to fester in the mouth. These dental problems can also cause increased wear and tear on your teeth. That's why the American Dental Association says that straightening your teeth can significantly affect your overall dental health.

Q. How does Invisalign work?

A. When you begin treatment, you'll have aligners custom-made for your teeth. These plastic trays are smooth and extremely comfortable—you'll hardly notice that they're moving your teeth. Just wear them 20-22 hours per day and remove them anytime you want. Every two weeks, you'll get a new set of custom aligners that will help guide your teeth into the right position. In approximately 12 months, you'll have your dream smile!

Q. Why is Invisalign better than regular braces?

A. Since Invisalign uses clear, plastic aligners instead of metal bars and brackets, it's automatically more comfortable for patients. In addition, the aligners can be removed at any time. This allows users to eat whatever foods they want and clean their teeth more effectively afterwards. Plus, there's no embarrassment—nobody will even know you're wearing braces!

Q: Will I be able to afford Invisalign?

A: Invisalign costs about the same as traditional metal braces. Some adults will spend less than \$2,000 to get the smile they've always dreamed of having. The average national cost for Invisalign is \$5,000 and some health insurance companies will contribute \$500 or more to this amount.
